

Should we care?

The Federal Environment Minister seems to say:

I don't take responsibility
For emissions Scopes 1, 2 or 3.
They've got nothing to do with me.

Though temperatures and floods are rising,
And animals and people are dying,
I think you're just catastrophising.
It's got nothing to do with me.

Reducing climate change? - not my responsibility,
I'm the Federal Environment Minister, you see.

Let Greta Thunberg ask how I dare,
But I accept no duty of care
For our kid's future health and economy
Diminished by our coal mining gluttony.

We need coal mines more than clean water and air,
And more than a climate we can all bear.

So, as long as I can approve a coal mine,
I feel we are all doing fine.
